SUMMARY

Senior Principal Software Engineer with 12+ years building enterprise-grade, cloud-native platforms, distributed systems, and AI-powered developer tooling. Currently lead architecture and engineering standards across Chef-360 and Chef Automate at Progress Software, spanning 8 product teams and 60+ engineers. Deep expertise in Go, Kubernetes, microservices, API design, and platform engineering, with a track record of shipping internal developer platforms, unified API gateways, and highly available distributed systems at scale. Targeting Staff Engineer, Principal Engineer, Software Architect, or Engineering Manager roles.

TECHNICAL SKILLS

Languages: Go (Golang), Python, Java, JavaScript, C++, Bash

Distributed Systems & Backend: Microservices, Event-Driven Architecture, API Design (REST / gRPC), Domain-Driven Design, High Availability, Disaster Recovery, Object Storage (S3 / MinIO)

Cloud & Platform: Kubernetes, Docker, Helm, CRDs, AWS (EC2 / ECS / RDS), GitOps, Platform Engineering, Internal Developer Platforms

Data & Messaging: PostgreSQL, PGPool, OpenSearch, MySQL, Redis, MongoDB, NATS JetStream, Kafka, RabbitMQ

Security & Identity: AuthN / AuthZ, OIDC, DexIDP, Keycloak, mTLS, API Gateway

AI Engineering: Agentic SDLC, Multi-Agent Orchestration, LLM Integration, Prompt Engineering, Spec-Driven Development, Code Generation, GitHub Copilot, Anthropic Claude, OpenAI GPT

DevOps & Observability: CI / CD, Buildkite, Jenkins, Habitat, Prometheus, Grafana, PagerDuty, OpsGenie

Leadership: Architecture & Design Reviews, Technical Mentoring, Engineering Management, Agile / Scrum

EXPERIENCE

Progress Software (Chef) — Senior Principal Software Engineer

Jan 2021 – Present

Chef-360 (DSM, Platform Services) & Chef Automate · Architecture Team (4) · 8 Teams · 60+ Engineers · Bengaluru · (formerly Senior Engineering Manager, 2021–2023)

- Lead architecture, design reviews, and engineering standards across Chef-360 (DSM, Platform Services) and Chef Automate for 8 product teams and 60+ engineers.
- Built an internal Code-Generation platform that produces production-ready Go microservices from OpenAPI specs, cutting new-service bootstrap from ~3 days to under 4 hours (~10x) across 8+ active microservices.
- Designed an end-to-end Agentic SDLC with human-in-the-loop checkpoints — a multi-agent pipeline (Product, Architect, Backend / Frontend Dev, Test, and Security agents) running on GitHub Copilot with Claude and GPT backends — automating requirement review, design, implementation, and security sign-off before human PR review.
- Owned engineering performance and scaling (Kubernetes right-sizing, PostgreSQL / PGPool and RabbitMQ tuning), improving API throughput ~35%, cutting P99 latency ~40%, and reducing infrastructure cost ~20%.
- Architected a unified API Gateway with AuthN / AuthZ (OIDC via DexIDP + Keycloak) enforcing consistent identity across 5+ Chef Platform products and 500+ enterprise deployments.
- Scaled Chef Automate HA on bare metal and VMs via Habitat across 10+ node clusters managing 60,000+ nodes; delivered PostgreSQL HA meeting enterprise DR and security compliance, and led zero-

downtime PostgreSQL and OpenSearch major upgrades.

- Built Data Feed integrations (Splunk, ELK, ServiceNow, Amazon S3, custom webhooks) adopted by 150+ enterprise compliance teams.
- As Senior Engineering Manager (2021–2023), led 12 engineers across 3 squads — feature delivery, on-call rotations, career growth, Agile ceremonies, and cross-functional PM / QE collaboration.

Grofers India Pvt. Ltd. (now Blinkit) — SDE II & Team Lead

Oct 2018 – Jan 2021

Supply Chain & Platform Engineering · Team of 10 · Gurugram

- Led engineering for Retail Supply Chain, Inventory Management, and Warehouse Management, improving order-fulfillment accuracy ~15% and reducing inventory shrinkage ~18% across 15+ large warehouses.
- Designed and built "Legend," a Monitoring-as-Code tool in Go where monitoring is defined as YAML inside the service repo, auto-generating Grafana dashboards and PagerDuty / OpsGenie alert integrations; adopted by 45+ microservices across 6 teams, cutting observability setup from ~2 hours to under 10 minutes per service.
- Established the org-wide Site Reliability Engineering process and RCA investigation framework.

Boomerang Commerce — Software Engineer

Jan 2018 – Oct 2018

Product Matching & Keyword Intelligence · Bengaluru

- Improved cross-retailer product-matching algorithms, increasing accuracy ~22% across 2M+ SKUs on 15+ retail platforms.
- Built keyword-harvesting pipelines enriching 1M+ product listings, improving search relevance and discoverability.

Mathologic Technologies — Technical Architect

Feb 2016 – Nov 2017

Operations Research & Optimization · Team of 5

- Built Locomotive Link Optimization for Indian Railways, optimizing scheduling for 13,000+ locomotives across 7,000+ stations with configurable slack, stress testing, and failure-impact analysis; estimated impact of INR 100 Cr+ (~\$12M) in savings.
- Delivered Crew Link Optimization for efficient duty scheduling across 1M+ railway crew staff nationwide.

Infosys — System Engineer

Feb 2014 – Jan 2016

Cross-Platform Communication Infrastructure · Team of 7

- Designed a multi-device cross-platform communication system over WebSocket supporting 10,000+ concurrent connections per deployment, with individual / group messaging, binary content, and member status notifications.
- Built client libraries for Java, C++, and JavaScript deployed across 3+ enterprise clients, plus a message router with dynamic group creation / removal and protocol-level message typing.

EDUCATION

PG Diploma in Advanced Computing — CDAC ACTS, Pune

2013 – 2014

B.E. in Computer Science — RTM Nagpur University

2008 – 2012
