

# VIVEK YADAV

Senior Principal Software Engineer · Software Architect · 12+ Years

Bengaluru, India · +91 810 523 7870 · vivekyadav.jit@gmail.com · linkedin.com/in/vivek-yadav-09 · github.com/vivek-yadav · vivek-yadav.github.io

## PROFESSIONAL SUMMARY

Senior Principal Software Engineer and Software Architect with 12+ years delivering distributed systems, cloud-native platforms, and developer tooling at enterprise scale. Currently serving as **Software Architect** across Chef-360 — **DSM, Platform Services, and Chef Automate** — at Progress Software, setting architecture standards and driving engineering excellence. Deep expertise in **Go, Kubernetes, microservices, API design, and platform engineering**. Track record of leading teams (up to 12 engineers), building code-generation platforms, unified API gateways, and HA distributed systems. Targeting **Staff / Principal Engineer, Engineering Manager, or Solutions Architect** roles.

## TECHNICAL SKILLS

|                  |                                                                                                                               |
|------------------|-------------------------------------------------------------------------------------------------------------------------------|
| Languages        | Go (Golang), Python, Java, JavaScript, Shell/Bash, C++                                                                        |
| Architecture     | Distributed Systems, Microservices, API Design (REST/gRPC), Event-Driven Architecture, Code Generation, Domain-Driven Design  |
| Cloud & Infra    | Kubernetes (K8s), Docker, Habitat, AWS (EC2/ECS/RDS), MinIO, Helm, CRDs                                                       |
| Messaging & Data | NATS JetStream, RabbitMQ, Kafka   PostgreSQL, PGPool, OpenSearch, MySQL, Redis, MongoDB                                       |
| Security & IAM   | AuthN/AuthZ, API Gateway, DexIDP (OIDC), Keycloak, mTLS                                                                       |
| DevOps & Obs.    | Buildkite, Jenkins, Grafana, Prometheus, Chef/InSpec, GitOps, CI/CD, Observability                                            |
| Leadership       | System Design, Platform Engineering, Technical Mentoring, Engineering Management, Agile/Scrum, Cross-functional Collaboration |

## PROFESSIONAL EXPERIENCE

### Progress Software

Jan 2021 – Present · Bengaluru, India

#### Software Architect

Jan 2023 – Present

##### Senior Principal Software Engineer

Chef-360: DSM, Platform Services & Automate · Architecture Team (4)

Serve as **Software Architect** across Chef-360 — **DSM, Platform Services, and Chef Automate** — owning architectural decisions, design reviews, and engineering standards across 3 product squads (~20 engineers).

Designed and shipped an internal **Code-Generation platform** that produces production-ready Go microservices from OpenAPI specs; reduced new service bootstrap **from ~3 days to under 4 hours (~10× faster)**, accelerating delivery across 8+ active microservices.

Owned the **Engineering Performance & Scaling backlog**: PostgreSQL/PGPool tuning, RabbitMQ topology optimisation, and Kubernetes resource right-sizing — **improving API throughput by ~35%, cutting P99 latency by ~40%, and reducing infrastructure cost by ~20%**.

Partnered with Product Management on roadmap refinement, customer escalations, and evaluation of new technologies (MinIO, messaging backends).

**Stack:** Go · PostgreSQL · PGPool · Kubernetes · Docker · Habitat · RabbitMQ · MinIO · OpenAPI · Chef

#### Engineering Manager & Principal Software Engineer

Jan 2021 – Dec 2023

Chef Automate · Team of 12

**Architected unified API Gateway** with AuthN/Z (OIDC via DexIDP + Keycloak) — enforcing consistent identity across **5+ Chef Platform products and 500+ enterprise deployments**.

Scaled **Chef Automate HA**: improved database failover (**RTO reduced from ~8 min to under 30 sec**), query performance, and horizontal scalability for enterprise clusters managing **10,000+ nodes**.

Built **Data Feed integrations** with Splunk, ELK Stack, ServiceNow, and Amazon S3 — adopted by **150+ enterprise compliance teams** to route Chef audit data to their preferred tooling.

Led zero-downtime PostgreSQL and OpenSearch major upgrade cycles for the open-source Chef Automate project.

Managed **12 engineers across 3 squads** — feature delivery, on-call rotations, career growth, Agile ceremonies, and cross-functional PM/QE collaboration.

**Stack:** Go · GoFiber · PostgreSQL · OpenSearch · NATS · Docker · Habitat · Buildkite · DexIDP · Keycloak

### SDE II & Team Lead

Oct 2018 – Jan 2021

Grofers India Pvt. Ltd. (now Blinkit)

Supply Chain & Platform Engineering · Team of 10 · Gurugram

- Led engineering for **Retail Supply Chain, Inventory Management, and Warehouse Management** — **improved order fulfillment accuracy by ~15% and reduced inventory shrinkage by ~18%** across **250+ dark stores**.
- Designed and built "**Legend**" — a Monitoring-as-Code CI/CD tool (Go) adopted by **45+ microservices across 6 engineering teams**, cutting observability setup from ~2 hours to under 10 minutes per service and standardizing dashboards org-wide.

**Stack:** Go · Python · Java · React.js · PostgreSQL · MySQL · Kafka · RabbitMQ · Redis · Kubernetes · Docker

---

## Software Engineer (SDE)

Jan 2018 – Oct 2018

### Boomerang Commerce

Product Matching & Keyword Intelligence · Team of 4 · Bengaluru

- Improved cross-retailer **product matching algorithms** — **increased match accuracy by ~22%**, expanding same-product identification coverage to **2M+ SKUs across 15+ retail platforms**.
- Built **keyword harvesting pipelines** enriching product metadata for **1M+ product listings**, improving search relevance and discoverability.

**Stack:** Java · AWS EC2 · AWS ECS · RDS · Snowflake

---

## Technical Architect

Feb 2016 – Nov 2017

### Mathologic Technologies

Operations Research & Optimization · Team of 5

- Built **Locomotive Link Optimization** for Indian Railways — optimised scheduling for **13,000+ locomotives across 7,000+ stations**, reduced idle time with configurable slack, stress testing, and failure impact analysis. Estimated impact: **INR 100 Cr+ (~\$12M USD) savings**.
- Delivered **Crew Link Optimization** for efficient duty scheduling across **1M+ railway crew staff** nationwide.

**Stack:** Go · Node.js · Angular 2 · D3.js · MongoDB · REST API

---

## System Engineer

Feb 2014 – Jan 2016

### Infosys

Cross-Platform Communication Infrastructure · Team of 7

- Designed a **multi-device cross-platform communication system** bridging native C++ apps with web clients over WebSocket — **supporting 10,000+ concurrent connections per deployment**, individual/group messaging, binary content, and member status notifications.
- Developed client libraries for **Java, C++, and JavaScript** deployed across **3+ enterprise clients**; built message router with dynamic group creation/removal and protocol-level message typing.

**Stack:** Java · C++ · WebSocket · JavaScript · REST API · Poco Library

---

## EDUCATION

---

### PG Diploma in Advanced Computing

CDAC ACTS, Pune

Aug 2013 – Feb 2014

### B.E. — Computer Science

RTM Nagpur University

2008 – 2012 · First Division (63%)

---
