SUMMARY

Senior Principal Software Engineer and Software Architect with 12+ years delivering enterprise-grade cloud-native platforms, distributed systems, and Agentic AI-powered developer tooling. Currently serving as Software Architect across Chef-360 — DSM, Platform Services, and Chef Automate — at Progress Software, owning architectural decisions and engineering standards for 8 product teams and 60+ engineers. Pioneered an end-to-end Agentic SDLC with human-in-the-loop checkpoints: a multi-agent pipeline where a Product Manager Agent reviews Jira requirements, an Architect Agent produces design docs, Backend and Frontend Dev Agents decompose work and plan with a Test Agent before implementation, and an Architect Agent validates output before Product and Security Agents sign off — all leveraging GitHub Copilot (Claude and ChatGPT LLM backends) and a deterministic Code-Generation platform to maintain consistent scaffolding. Deep expertise in Go, Kubernetes, microservices, API design, and platform engineering. Track record of leading teams up to 12, building internal platforms, unified API gateways, and HA distributed systems. Targeting Staff Engineer, Principal Engineer, Engineering Manager, or Solutions Architect roles.

EXPERIENCE

Progress Software — Software Architect (Senior Principal Software Engineer)

Jan 2023 – Present

Chef-360: DSM, Platform Services & Automate · Architecture Team (4) · 8 Teams · 60+ Engineers · Bengaluru

Serve as Software Architect across Chef-360 — DSM, Platform Services, and Chef Automate — owning architectural decisions, design reviews, and engineering standards across 8 product teams (60+ engineers). Pioneered an end-to-end Agentic SDLC with human review checkpoints: a Product Manager Agent reviews Jira tickets and updates requirements; an Architect Agent produces or updates design docs; Backend and Frontend Dev Agents review requirements and design, create sub-tasks, and engage a Test Agent to plan test coverage before implementation begins; after implementation and test runs pass, the Architect Agent validates the work, a Product Agent reviews the summary, and a Security Agent performs a final review before a PR is raised for human team review. Backend and Frontend Dev Agents leverage the internal Code-Generation platform throughout to maintain deterministic scaffolding. All agents run on GitHub Copilot using Claude and ChatGPT LLM backends. Built the Code-Generation platform that produces production-ready Go microservices from OpenAPI specs, cutting new service bootstrap from ~3 days to under 4 hours (~10× faster) across 8+ active microservices. Owned Engineering Performance & Scaling: Kubernetes right-sizing, PostgreSQL/PGPool tuning, RabbitMQ optimisation — improving API throughput by ~35%, cutting P99 latency by ~40%, and reducing infrastructure cost by ~20%. Stack: Go · Kubernetes · OpenAPI · GitHub Copilot · Anthropic Claude · OpenAI GPT · PostgreSQL · PGPool · RabbitMQ · MinIO · Docker · Chef

Progress Software — Engineering Manager & Principal Software Engineer

Jan 2021 – Dec 2023

Chef Automate · Team of 12 · Bengaluru

Architected a unified API Gateway with AuthN/Z (OIDC via DexIDP + Keycloak) enforcing consistent identity across 5+ Chef Platform products and 500+ enterprise deployments. Scaled Chef Automate HA — deployed on bare metal and VMs via Habitat across 10+ machine clusters, managing 60,000+ Chef-managed nodes; implemented PostgreSQL HA meeting strict Disaster Recovery and security compliance requirements mandated by enterprise customers. Built Data Feed integrations with Splunk, ELK Stack, ServiceNow, Amazon S3, and custom webhooks — adopted by 150+ enterprise compliance teams to route Chef audit data to their preferred tooling. Led zero-downtime PostgreSQL and OpenSearch major upgrade cycles for the open-source Chef Automate project. Managed 12 engineers across 3 squads — feature delivery, on-call rotations, career growth, Agile ceremonies, and cross-functional PM/QE collaboration. Stack: Go · GoFiber · PostgreSQL · OpenSearch · NATS · Habitat · Docker · Buildkite · DexIDP · Keycloak

Grofers India Pvt. Ltd. (now Blinkit) — SDE II & Team Lead

Oct 2018 – Jan 2021

Supply Chain & Platform Engineering · Team of 10 · Gurugram

Led engineering for Retail Supply Chain, Inventory Management, and Warehouse Management — improved order fulfillment accuracy by ~15% and reduced inventory shrinkage by ~18% across 15+ large warehouses. Designed and built "Legend" — a Monitoring-as-Code tool (Go) where monitoring is defined as YAML within the service repo itself, auto-generating Grafana dashboards and alert integrations with native PagerDuty and OpsGenie support based on developer-defined metrics; adopted by 45+ microservices across 6 engineering teams, cutting observability setup from ~2 hours to

under 10 minutes per service. Also established the Site Reliability Engineering process and RCA investigation framework org-wide. Stack: Go · Python · Java · React.js · PostgreSQL · MySQL · Kafka · RabbitMQ · Redis · Grafana · PagerDuty · OpsGenie · Kubernetes · Docker

Mathologic Technologies — Technical Architect Feb 2016 – Nov 2017
Operations Research & Optimization · Team of 5

Built Locomotive Link Optimization for Indian Railways — optimised scheduling for 13,000+ locomotives across 7,000+ stations with configurable slack, stress testing, and failure impact analysis. Estimated impact: INR 100 Cr+ (~\$12M USD) savings. Delivered Crew Link Optimization for efficient duty scheduling across 1M+ railway crew staff nationwide. Stack: Go · Node.js · Angular 2 · D3.js · MongoDB · REST API

Boomerang Commerce — Software Engineer (SDE) Jan 2018 – Oct 2018
Product Matching & Keyword Intelligence · Bengaluru

Improved cross-retailer product matching algorithms — increased accuracy by ~22% across 2M+ SKUs on 15+ retail platforms. Built keyword harvesting pipelines enriching 1M+ product listings, improving search relevance and discoverability. Stack: Java · AWS EC2 · AWS ECS · RDS · Snowflake

Infosys — System Engineer Feb 2014 – Jan 2016
Cross-Platform Communication Infrastructure · Team of 7

Designed a multi-device cross-platform communication system over WebSocket — supporting 10,000+ concurrent connections per deployment, individual/group messaging, binary content, and member status notifications. Developed client libraries for Java, C++, and JavaScript deployed across 3+ enterprise clients; built message router with dynamic group creation/removal and protocol-level message typing. Stack: Java · C++ · WebSocket · JavaScript · REST API · Poco Library

EDUCATION

CDAC ACTS, Pune 2013 – 2014
PG Diploma in Advanced Computing

RTM Nagpur University 2008 – 2012
B.E. in Computer Science · First Division (63%)

SKILLS

Go (Golang) · Python · Java · JavaScript · Shell/Bash · C++ · Agentic SDLC · LLM Integration · Prompt Engineering · Anthropic Claude · OpenAI GPT · GitHub Copilot · Spec-Driven Development · Distributed Systems · Microservices · API Design (REST/gRPC) · Event-Driven Architecture · Code Generation · Domain-Driven Design · Kubernetes (K8s) · Docker · AWS (EC2/ECS/RDS) · MinIO · Helm · CRDs · NATS JetStream · RabbitMQ · Kafka · PostgreSQL · PGPool · OpenSearch · MySQL · Redis · MongoDB · AuthN/AuthZ · DexIdP (OIDC) · Keycloak · mTLS · API Gateway · Buildkite · Jenkins · CI/CD · Grafana · Prometheus · GitOps · Observability · System Design · Platform Engineering · Technical Mentoring · Engineering Management · Agile/Scrum
